Project Details

Award winning home gets full protection from GBIS. North West based GB Integrated Systems Ltd, designed and installed the very latest technology to cover the client's specific requirements. They were responsible for the fire detection system, intruder alarm, access control, gate automation, vehicle recognition, safe room applications, and the overall integration of all systems. This prestigious build presented numerous challenges throughout the construction process, to which GBIS

Rose to the challenge, and implemented the very best solutions.

Product selection and functionality was high priority due to the advanced ultra-modern building design, and the client's desire for minimalistic looks. Integrated hidden wire ways were installed and the technology installed utilises the latest in IP connectivity for ultimate flexibility and future proof applications.
