

CASE STUDY: WOODLANDS CLOSE

To design & supply a home cinema and upgrade the whole house to Control4 automation

Home Automation and Bespoke Home Theatre is not just a dream for the family of this luxury home in Wigan, North West, England. The GBIS team were tasked with the design supply and installation of a Bespoke Home Theatre which consisted of a purpose built single storey extension, considerably integrated into the existing dwelling incorporating the acoustic requirements for home cinema installations.

The result: A truly stunning six seater home theatre installation through construction design and management. On completion, the client liked what GBIS had done that much that they converted the whole house over to Control4 home automation and lighting control through a series of building blocks to meet budget and family life.
