

ST. EDWARD'S SCHOOL

FIRE DETECTION SYSTEM UPGRADE FOR THE SAFETY OF ALL PUPILS.

With the ever increasing health and safety regulations being required by schools and other public sector organisations, St. Edwards Primary School, situated in the east of Oldham, called upon the expertise and experience of GB Integrated Systems Limited to update and install their new fire detection system.

GBIS carried out a full fire alarm audit post the recent Fire Risk assessment and as a result provided a full turnkey solution. The team designed, supplied, installed and commissioned an automatic fire detection system, which utilises open protocol technology, now meets the latest BSEN standards BS5839:2002 Pt1, classification L2 regulations. The client was thrilled with team at GBIS and upon completion of these works within the main school, GBIS have now been awarded extra works, which include the installation and commissioning of a fire detection system within other premises on the site.
